

Afi2GO

Afi2GO™

For Reporting Farm Events

For Reporting Farm Events

Afi2GO is a portable PDA device used for reporting events and animal treatments.

The Afi2GO PDA is a tool in the hands of the herdsman for accurate and efficient data collection. It was developed as a complementary accessory to the AfiMilk system for easier reporting of events while working outside the office.

Operation

Working within the AfiMilk management program the herdsman commences his daily routine selecting those animals in need of attention and downloads the information directly to the PDA. Using Afi2GO on his rounds in the animal pens, the farmer identifies those animals needing treatment, recording the information, as he proceeds, in the PDA. When the working session is over, the herdsman connects the PDA to the PC and downloads the data AfiMilk management program. The entire procedure is quick, carried out with the minimal number of key strokes and makes the entry of large amounts of data simple and convenient.

Afi2GO includes a RFID option for identifying the animals electronically from their ID tags. Thus the number of errors in animal identification is significantly reduced and the entire working process becomes fast and easy.

Afi2GO

Applications

Afi2GO is built for different types of operations:

Working in Pens

When working in animal pens, all animals are identified one by one and the device alerts for those animals needing attention. This procedure makes tracing animals in large groups quick and practical.

Hospital Pens

There are two ways of working with animals pre-selected and confined in a treatment pen:

Specific Treatments

The operator selects an option for a single group event such as breeding, vaccinating, or pregnancy checks. Based on the ID information, the operator confirms or declines the treatment / diagnosis for every animal identified.

Multiple Treatments

Afi2GO notifies the operator about the required treatment for every animal identified. The operator can then confirm or select the treatment to register.

Working Stations

This option allows the operator to run a line of animals through a data station, for example weighing, checking-cage, or hoof trimming, and record information in the Afi2GO device.

Optional Identification Methods	Cows	Small Ruminants
Manual ID	✓	✓
ISO RFID	✓	✓
AfiMilk Pedometers ID	✓
